

## ABSTRACT OF THE DISCLOSURE

A transmitter card for a personal computer includes a circuit board which plugs into the personal computer and which is coupled to exchange data via an industry-standard bus in the personal computer. Radio frequency modulation circuitry on the circuit board receives the data and transmits radio frequency signals responsive thereto.

1. A transmitter card for a personal computer, comprising:  
a circuit board which plugs into the personal computer;  
radio frequency modulation circuitry on the circuit board;  
the radio frequency modulation circuitry receiving data from the personal computer via an industry-standard bus and transmitting radio frequency signals responsive thereto.
